Wariddon Rattanamalee

Software Engineer

Backend, full-stack and AI-assisted development

099-323-2150 wrd8856@hotmail.com

Engineering profile

Backend and integration

Java, Spring Boot and Go
Banking APIs, customer workflows and service modernization

Full-stack and automation

Node.js, React, Next.js and Playwright
Order operations, staff tools and system integration

Claude and Codex support analysis, coding and verification.

Professional experience

Period	Company or assignment	Role
May 2024 - Present	Extend IT Resource Client: SCB	Backend Developer
Jun 2026 - Present	InblackM	Senior Tech Development Consultant, part-time
2023 - 2024	TISCO Financial Group	Backend Developer
2022	CAT Telecom	Java Developer
2018 - 2022	Thai Insurance	Programmer

SCB is my primary role. InblackM is a concurrent part-time role.

SCB banking services

Extend IT Resource (Apar Technologies)
Backend Developer, May 2024 to present
Client: Siam Commercial Bank

Service development

Lending, AML reporting and customer data APIs
Java/Spring Boot and external API integration

Modernization and support

Spring Boot and gateway upgrades, Azure Managed Redis
SCB Connect migration, runtime investigation and UAT

Azure Managed Redis modernization

Challenge

Identity tokens expire while services keep running.
A reconnect must obtain a current credential.

My contribution

Implemented token renewal and connection pool rollover.
Adapted reactive gateway authentication on reconnect.

Java, Spring Boot, Lettuce, Azure Entra Managed Identity

AML report delivery

A monthly report needs defined behavior for files, empty datasets and email failures.

My implementation

Spring Boot reads report files from Azure Blob Storage.
SMTP delivery handles ZIP attachments and notifications.

Behavior covered

Separate report, no-data and failure paths
Regression cases for email content and delivery errors

Customer data correctness

API mapping must preserve the intent of each update.

Input	Update behavior
Field omitted	Preserve the existing value
Explicit empty value	Send the downstream clear marker
New value	Replace the existing value

Thai and English fields have regression coverage.

Related fixes cover large income values and audit timestamps.

InblackM platforms and automation

Senior Tech Development Consultant
Part-time, June 2026 to present

Customer and staff applications

Order review, package pricing and operations dashboards
React/Next.js screens with Node.js backend APIs

Services and integrations

Order workers, staff SSO and provider investigation
Go ERP work on tenants, secrets and attendance geofencing

Order handover and payment state

Operational problem

Orders waiting too long need a controlled handover without reopening closed or staff-owned work.

My implementation

Updated queue and source records in one transaction.
Added state, ownership and retry eligibility checks.

Verification

Regression cases cover rollback and repeated calls.
Manual review stays separate from confirmed fulfillment.

Shared staff identity across applications

System and Audit need a consistent staff login.

My contribution

Integrated Audit with System SSO.
Updated session verification, login/logout and backend requests.

Verification focus

Session expiry, public-origin redirects and return navigation
Regression tests across the two applications

Read-only admin AI assistant

Implementation case for operational investigation

Evidence	Server-side search over bounded order and queue records
Model	OpenAI Responses API with structured JSON output
Validation	Check evidence references, permissions and response shape
Fallback	Keep search results when AI cannot provide a valid answer

AI-assisted engineering in both roles

Claude and OpenAI Codex

At SCB

Trace related services, compare migration patterns,
draft fixes and regression cases for banking APIs and Redis.

At InblackM

Investigate orders across repositories, refine interfaces,
review integrations and draft tests and technical handoffs.

I review changes and validate behavior against requirements.

TISCO Financial Group

Backend Developer, 2023 to 2024

Access Governance

Python backend services and Angular screens
User access workflows and application features

Digital Signature System

Java development and defect investigation
LoadRunner performance testing support

CAT Telecom

Programmer and Java Developer, 2022

Application development

Java and Spring Boot features
Testing against business requirements

Tools and environment

Oracle and database development tools
Docker, Podman and GitLab

Thai Insurance

Programmer, 2018 to 2022

DMSPilot API

Real-time policy submission to OIC
Certificate handling and AES encryption

Business applications

TMB Tablet, administration and partner services
Java, Spring, SQL Server, DB2 and Informix

Education and professional development

Master of Business Administration

Finance and Banking
Ramkhamhaeng University, 2022 to 2024

Bachelor of Science

Computer Science
Burapha University, 2014 to 2018

KBTG Java and Go Bootcamp

Additional coursework through FutureSkill, True Digital Academy and Coursera

Let us discuss your engineering needs
